General Intro

With the aid of our smart backend and data points, CoinalyzerAI offers all defi enthusiasts a one-stop shop for all their defi needs by ensuring that a token has the highest amount of accurate security measures.

Coinalyzer
A Smart Defi Protector

Problem

Why CoinalyzerAI is Needed?

01

Troubles of upcoming traders

Clueless newbies often fail to compete with the pro traders because of the lack of tools available to them

02

Endless search for the answers

They don't even get close to being profitable by scrolling through bscscans and seeking assistance from other degens

03

Paradox of Choices

So do you pour your own money and precious time learning this for months or wish to have a solutions just a click away?

Solution

CoinalyzerAI to the rescue

Our backend contract code and apis goes over tons of data points to give you the safety information you need.

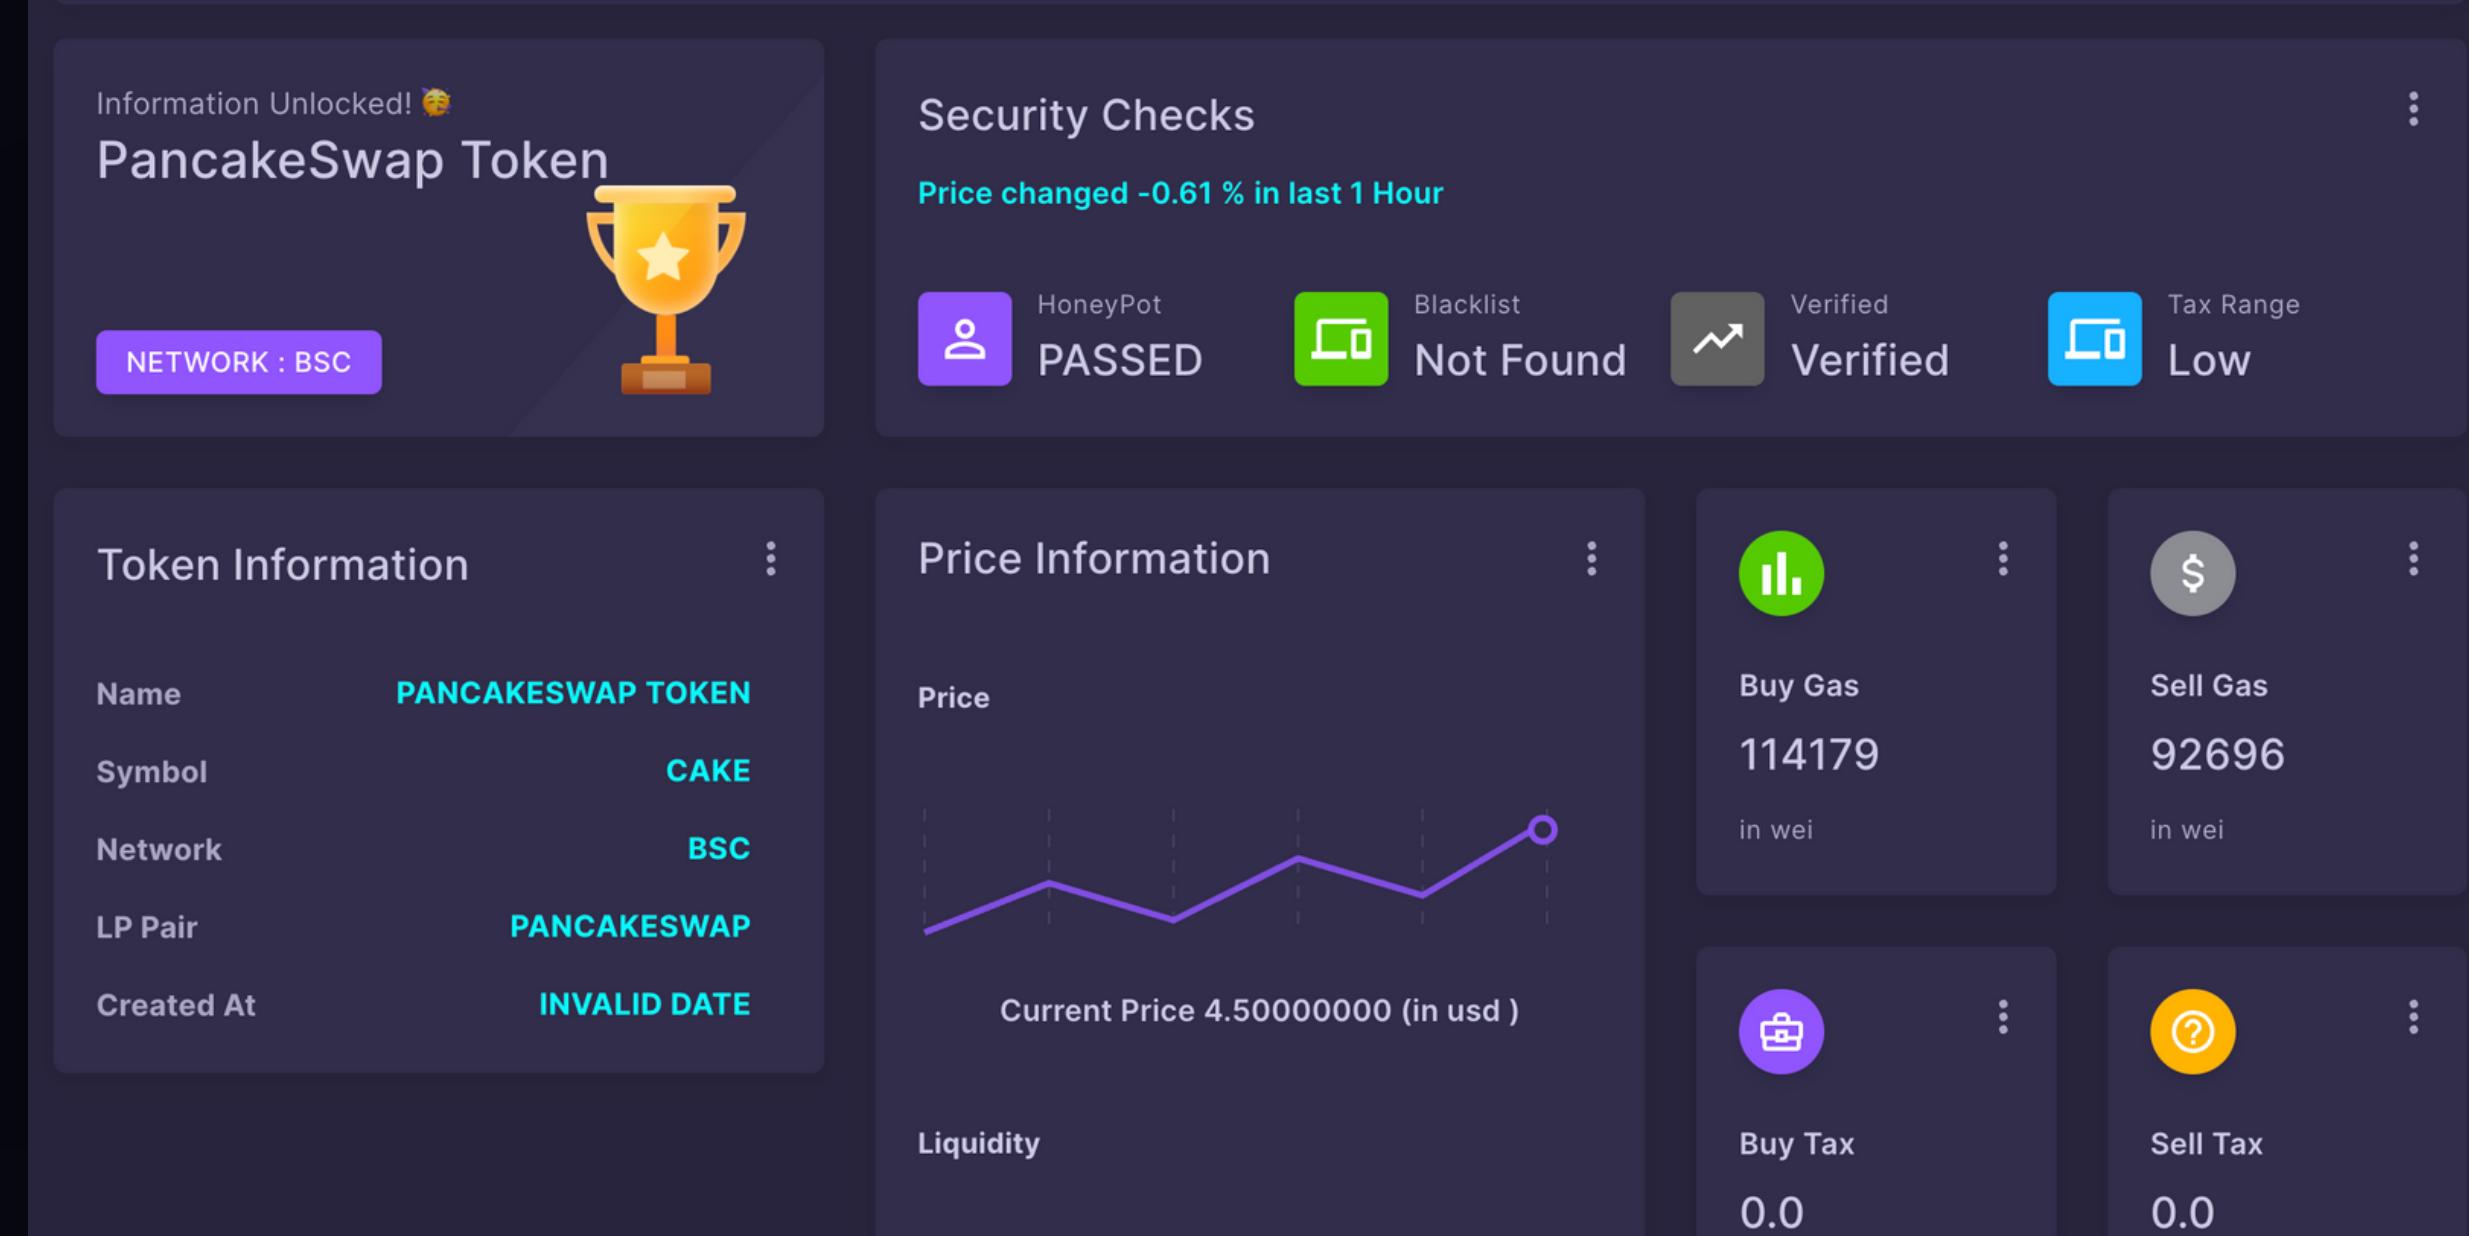

- SOLUTION 01
Honeypot detector
- SOLUTION 02
Blacklist detector
- SOLUTION 03
Price and liquidity info
- SOLUTION 04
Token information

CoinalyzerAI

Blacklist detector -
A smart contract's blacklist feature
prevents bots from buying and snipers
from operating.

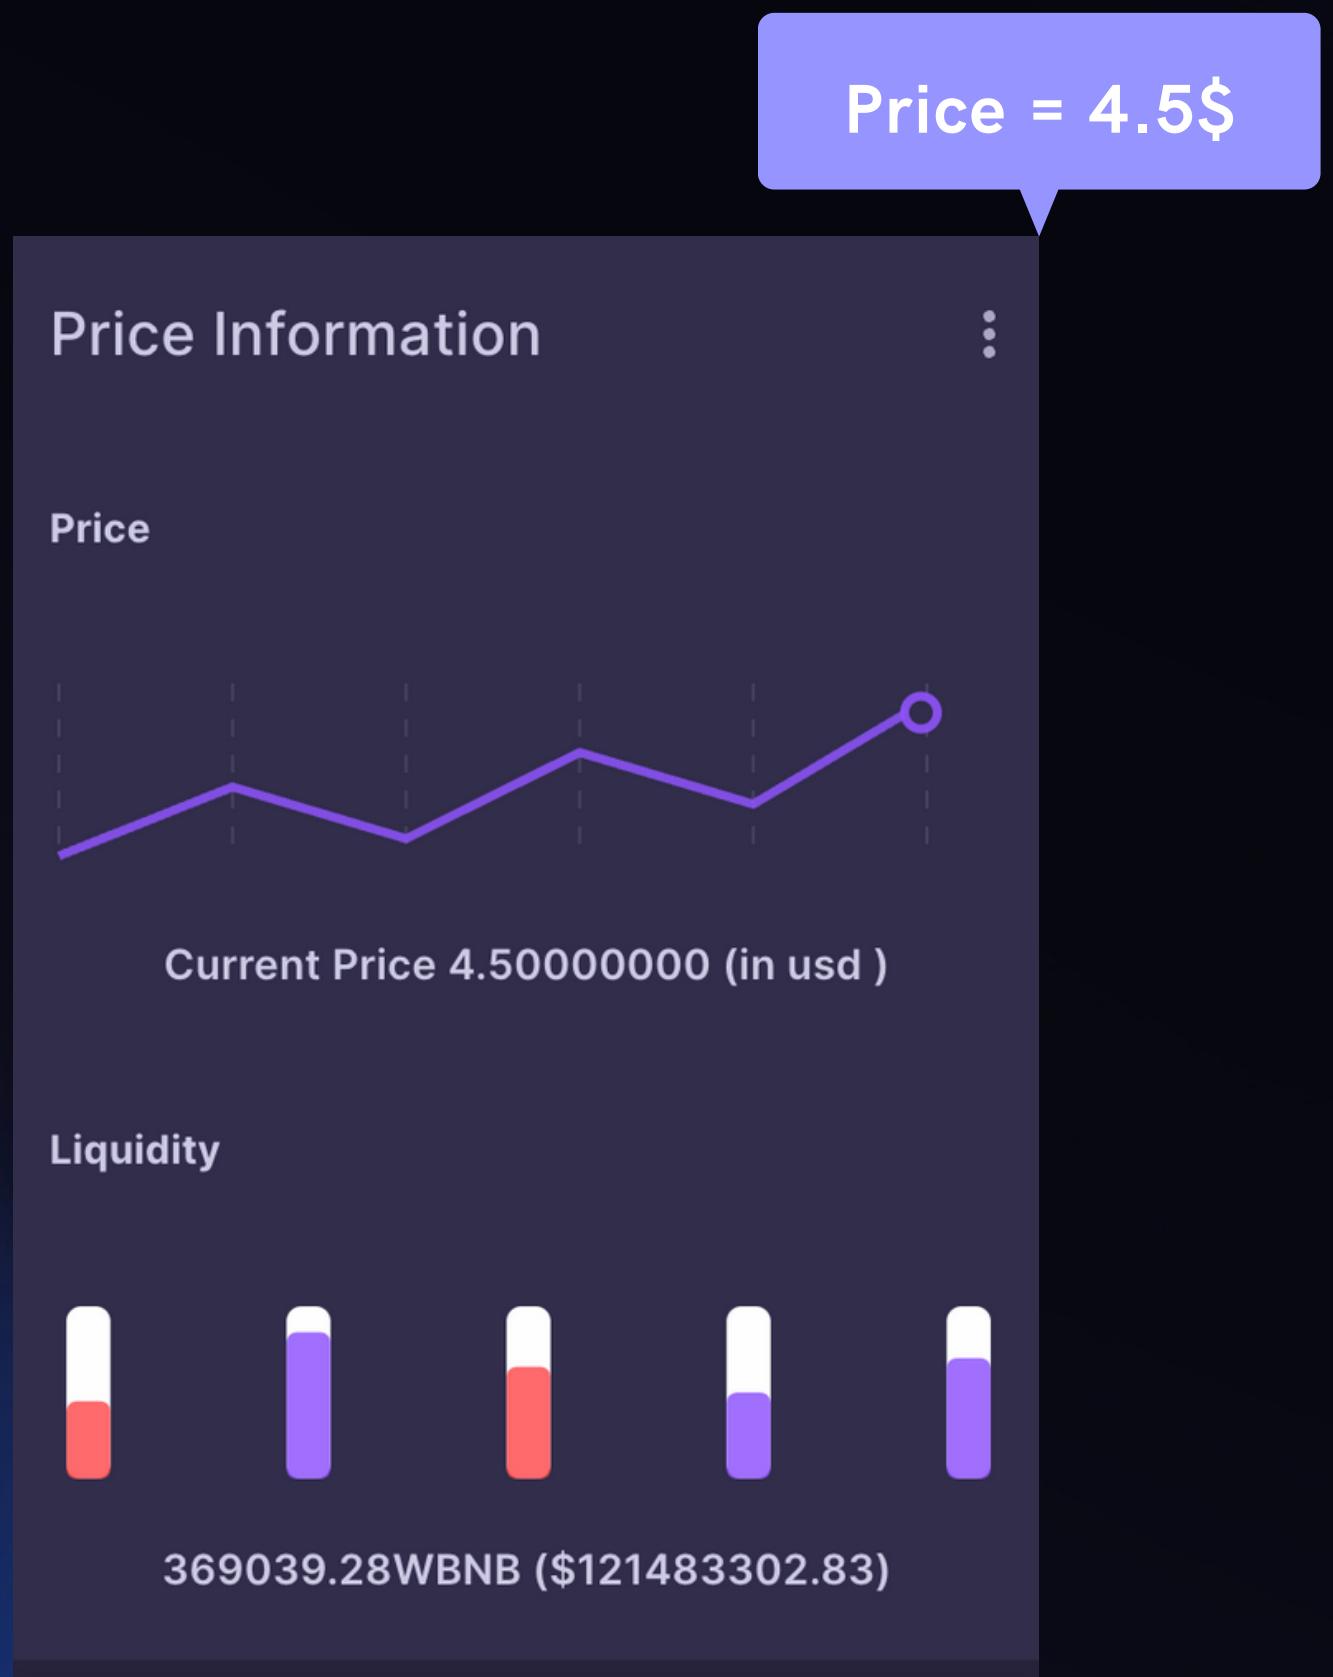

Misused by malicious devs this function can trap normal buyers and block their funds

After scanning the contract, CoinalyzerAI provides you with the blacklist information for the token so you can protect your money and avoid falling for scammers

The screenshot displays the CoinalyzerAI platform interface for analyzing the PancakeSwap Token. The main card shows a trophy icon and the text "Information Unlocked! 🎉 PancakeSwap Token". It includes a "NETWORK : BSC" badge and a "HoneyPot" security check labeled "PASSED". The "Blacklist" check is labeled "Not Found". The "Verified" status is shown as "Verified". A "Tax Range" section indicates "Low". Below this, there are sections for "Token Information" (Name: PANCAKESWAP TOKEN, Symbol: CAKE, Network: BSC, LP Pair: PANCAKESWAP, Created At: INVALID DATE) and "Price Information" (Price chart showing price changes over time, Current Price: 4.50000000 (in usd), Liquidity section). To the right, there are additional cards for "Buy Gas" (114179 in wei), "Sell Gas" (92696 in wei), "Buy Tax" (0.0), and "Sell Tax" (0.0).

Price and liquidity info

Without jumping to different charts our dapp will give you the current token price and relative liquidity pool info

1

Helps you keep your research data aligned and clean in one single window.

2

● The Problem

We define a honeypot literally, we can think of it as a honey pot where your money gets stuck and won't drain.

—
Even for those who deal in tiny coins on a daily basis, they are frequently more difficult to spot since they are less evident to the untrained eye.

Our honey pot detector function verifies that the token's buys and sales are genuine and functional

—
Our contracts makes a call to the concerning contract of the token to give you the above relevant info.

Honeypot detector

● The Solution

Tokenomics

CoinalyzerAI

PRESALE

50%

80%

Presale & Liquidity

50% of the tokens from total supply will go to presale and 30% to liquidity

LIQUIDITY

30%

MARKETING

8%

13%

Marketing and team share

8% of the tokens are reserved for Marketing and 5% goes to team

TEAM

5%

DEVELOPMENT

7%

7%

Development

7% of the tokens are reserved for Development

Buy - Sell Tax

1

Buy - 0%

2

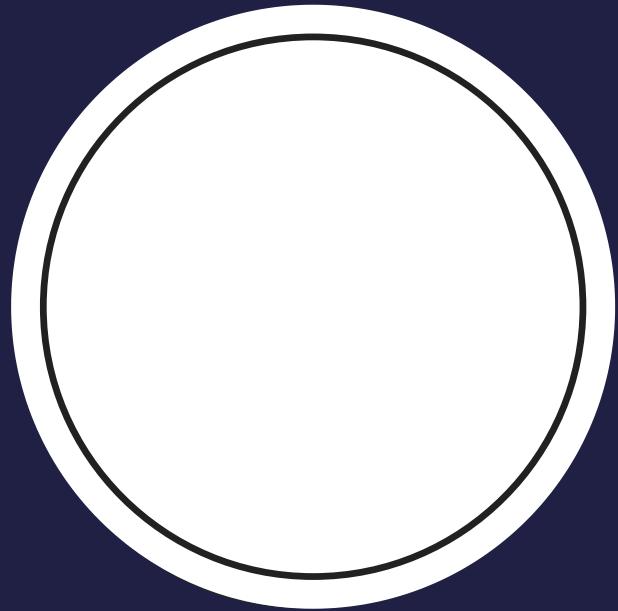

Sell - 0%

Coinalyzer scans the contract and give you the buy and sell data taxes that helps you to decide slippage on the trading token

Our team

Let's meet our team members who are professional and have rich experiences.

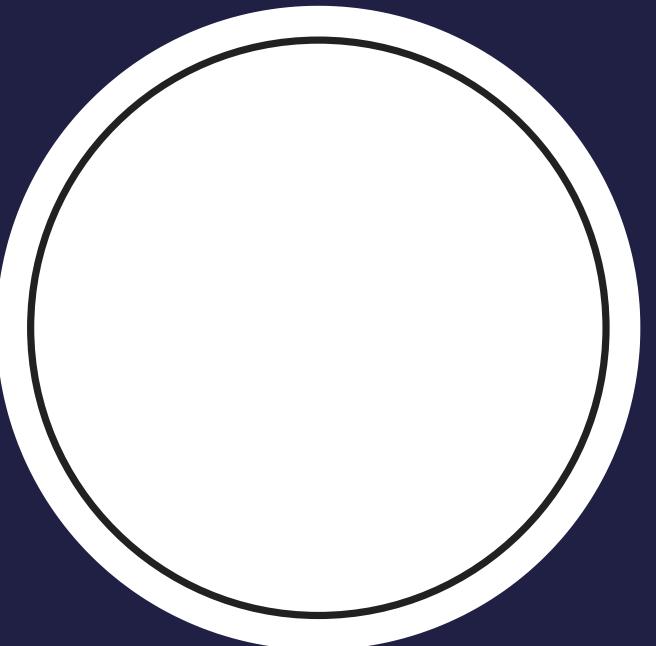

BENJAMIN SHAH

Founder

Interesting work experiences.

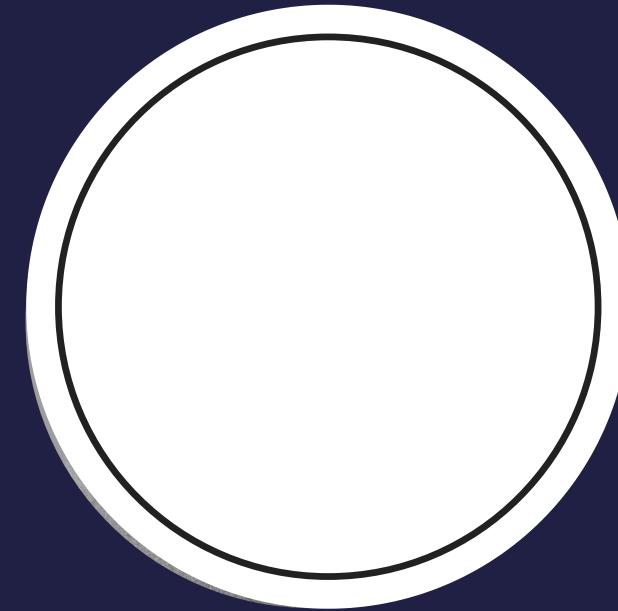

TAKEHIRO KANEKI

Graphic Designer

Interesting work experiences.

RUFUS STEWART

Visual Designer

Interesting work experiences.
